

Energy Resources and Policy

Assignment: A personal view of nuclear power

The task is to write a short essay (around 600 words) giving your views on the merits or otherwise of nuclear power as an energy source in the UK. Detailed descriptions of the technology, surveys of its present use world-wide, even-handed descriptions of the arguments for and against are not required. This should be a personal view, giving reasons for the views that you hold, and making reasonable suggestions for how nuclear power should be managed in the future.

The submission deadline will be announced on the class Web site.

External sources of information should be referenced in the usual way. You are reminded of our regulations about plagiarism – by all means refer to published articles on the subject, and quote from them if you wish. But this article must be your own work and convey the views that you hold.
